1. PV input voltage should not exceed the specified maximum value. Exceeding this limit may trigger system protection or affect normal operation.

2. In grid-connected parallel operation, load-side current is limited by the maximum input current rating of the grid port.

3. 50±1W indicates the system self-consumption measured under light-load conditions (<300W total load) in a laboratory environment.

4. The 0 ms transfer time applies under the following conditions:compliance with local grid regulations, in the open-circuit state of the power grid, total load power does not exceed the rated output backup power, stable grid conditions.

5. Maximum 3 battery packs supported for wall-mounted installation.
